=== ELECTRONICS FOR SALE ===

Please make offers and email me to arrange to see. I'm in San
Francisco's Mission District.

SHORTWAVE RADIO -- "COMMUNICATIONS RECEIVER" Radio Shack's DX-302, digital
dial tuning, continuous coverage from longwave (10 kHz) through 30 MHz
shortwave (and regular AM broadcast, too). Wide & narrowband, BFO, noise
limiter, antenna trimmer, muting (for use with a transmitter) -- works
GREAT for a ham shack or for serious shortwave or longwave listener.
Works on AC or batteries. This model originally sold for \$400 -- DO NOT
mistake it for the cheap ones with less sensitivity. This set was designed
for the serious listener. It was made in 1980.

COMMODORE 64

The original, not a cheaper later one. Also with an original 1541 drive
(and not the cheaper later version), includes Boss joystick, various

software and cartridges including an oddity: a C-64 to IEEE-488 interface. This was originally bought to interface with a Pet, but can be used to interface with scientific instruments using the standard IEEE-488 interface. Box full of stuff.

MACINTOSH -- ORIGINAL

Original 128k with 1 internal and 1 external floppy. With lots of software (MS Word, MS Multiplan and Chart (which were combined later to form Excel), Psion chess game (excellent), MS Flight simulator, Concertware (write music in 4-part harmony), modem, etc.

PRINTER -- IMAGEWRITER (I)

Serial printer designed for Mac, but will work as a regular serial printer as well. With a Mac it prints full graphics and Mac character set. Also with printer stand and a box of miniperf paper.
